

Stuart Turner has a proud history that stretches back over 115 years. Founded by Sidney Marmaduke Stuart Turner, he started his career as a resident engineer in charge of electrical generators, using his free time to design, produce and sell steam engines. In 1906, Stuart Turner was incorporated, with a vision to continually strive to be the best through technical excellence and innovation - and this still holds true today. Throughout history, the company have continually innovated and manufactured a wide range of products including steam engines, motor bike engines, petrol and diesel engines, generating sets, leisure and model boat engines, pumps for dairy milking and to the present day, water pumps. Trading from Henley-on-Thames, the Broad Gates site acquired in 1917 is where the Stuart Turner Group still operates from today.
